

FLOODPLAIN DEVELOPMENT PERMIT

Section I. Applicant and Project Information (Applicant Responsibility)

PERMIT DOCUMENT CHECKLIST

- Detailed Project Cost Estimate (required)
- Documentation demonstrating the value of the existing structure (required):
 - Either an Assessment or Appraisal
- Historical Structure documentation (Required for Historical Exemption)
- Site Plan/Survey attached showing improvements (Required for new build or addition)
- Existing Elevation Certificate (From previous elevation assessment)

Please review all documentation and ensure all submitted items match those noted on permit.

General Information (Applicant Responsibility)

1. All portions of this checklist must be filled out in full, and appropriate documentation provided, before acceptance of Floodplain Permit Application.
2. No work may begin within a floodplain designated as AE, and A, until a floodplain development permit is issued.
3. The development may not be used or occupied until it has been approved by the Zoning Administrator for compliance with the floodplain regulations, including an updated Elevation and Floodproofing Certificate.
4. By signing and submitting this application, the Applicant certifies that all statements contained in Section I and any additional documents submitted with the application are true and accurate.
5. The permit may be revoked and a stop work order may be issued if any false information is provided in this application.

Section II: Permit Review (To be completed by City staff)

City Engineer/Floodplain Administrator Review *All elevations based on NAVD '88*

1. FIRM map panel and date _____
2. The proposed development is located within Zone:
 - AE AE w/Floodway
 - A

(If NONE of the above, a floodplain development permit is not required)
3. Base Flood Elevation (NAVD '88) _____
4. The project is a substantial improvement or renovation YES NO
 - a. Project Cost Estimate (Attach): _____
 - b. Value of Existing Structure (Attach): _____
 - c. Calculated Percentage of Improvement: _____
5. Site Plan/Survey
 - Minor Major Not Applicable

Zoning Administration Review

- The project includes alterations to qualified historic structure as defined in Section 14.1-7-17 of the Winchester Zoning Ordinance YES NO
- Documentation Attached? YES NO N/A
- Administrative Historic Exemption Issued? YES NO N/A

Building Official Review

1 foot of freeboard is required for all construction

1. Elevation Certificate Proposed Existing Condition
 - **Attached YES NO
2. Design Flood Elevation (BFE + Freeboard) _____
3. Proposed finished floor elevation _____
4. Elevation of mechanical equipment _____
5. Crawl Space is below grade on all sides YES NO
 - **If yes, plans must be revised (not permitted)*
 - a. Flood venting _____
 - b. Size of Crawl Space (square feet) _____
 - c. Number of flood vents _____
 - d. Capacity of flood vents (square inches) _____
 - e. Type/Model number(s) of engineered flood vents _____
 - f. Engineer design documents submitted? YES NO
 - **Engineering design documents are required for engineered flood vents.*
6. Elevation of attached garage _____
 - a. Plumbing or mechanical within garage YES NO

****Plumbing and mechanical required to be elevated above DFE**

- b. Size of attached garage (square feet) _____
- c. Number of flood vents (if below DFE) _____
- d. Capacity of flood vents (square inches) _____
- e. Type/Model number(s) of engineered flood vents _____
- f. Engineer design documents submitted? YES NO

****Engineering design documents are required for engineered flood vents**

- 7. Is the structure floodproofed (non-residential only)? YES NO
- 8. Floodproofing certificate submitted? YES NO

****Floodproofing certificate, prepared by a registered design professional (engineer), required if this type of construction is proposed**

ACCESSORY STRUCTURE DATA

- 1. Flood zone at location of accessory structure _____
- 2. Design Flood Elevation (BFE + Freeboard) _____
- 3. Site Plan/Survey attached? YES NO

AE Zone

- 1. Proposed floor elevation of structure _____
- 2. Elevation of mechanical equipment _____
- 3. Flood resistant construction to DFE? (required) YES NO
- 4. Flood Venting (if below BFE)
 - a. Size of enclosed space (square feet) _____
 - b. Number of flood vents _____
 - c. Capacity of flood vents (square inches) _____
 - d. Type/Model number(s) of engineered flood vents _____
 - e. Engineer design documents submitted? YES NO

****Engineering design documents are required for engineered flood vents**

Definitions:

SUBSTANTIAL DAMAGE. For the purpose of determining compliance with the flood provisions of this code, damage of any origin sustained by a structure whereby the cost of restoring the structure to its before-damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

SUBSTANTIAL IMPROVEMENT. For the purpose of determining compliance with the flood provisions of this code, any *repair, alteration, addition*, or improvement of a building or structure, the cost of which equals or exceeds 50 percent of the market value of the structure, before the improvement or *repair* is started. If the structure has sustained *substantial damage*, any repairs are considered *substantial improvement* regardless of the actual *repair* work performed. The term does not, however, include either:

- 1. Any project for improvement of a building required to correct existing health, sanitary, or safety code violations identified by the *code official* and that is the minimum necessary to ensure safe living conditions; or
- 2. Any *alteration* of a historic structure, provided that the *alteration* will not preclude the structure's continued designation as a historic structure.

SUBSTANTIAL STRUCTURAL DAMAGE. A condition where:

1. In any story, the vertical elements of the lateral force resisting system have suffered damage such that the lateral load-carrying capacity of the structure in any horizontal direction has been reduced by more than 33 percent from its pre-damage condition; or
2. The capacity of any vertical gravity load-carrying component, or any group of such components, that supports more than 30 percent of the total area of the structure's floor(s) and roof(s) has been reduced more than 20 percent from its pre-damage condition and the remaining capacity of such affected elements, with respect to all dead and live loads, is less than 75 percent of that required by this code for new buildings of similar structure, purpose and location.
